

**Unit 3 Software Development – 2024**
**Outcome 1 Software development: programming – Template for developing an assessment task – Blank**

<b>Outcome 1</b> On completion of this unit the student should be able to interpret teacher-provided solution requirements and designs, and apply a range of functions and techniques using a programming language to develop and test working software modules.			<b>Assessment task development</b>
<b>Key knowledge</b>	<b>Key skills</b>	<b>VCAA Performance descriptors (Very high)</b>	
<ul style="list-style-type: none"> <li>• methods for documenting a problem, need or opportunity</li> <li>• methods for determining solution requirements, constraints and scope</li> <li>• methods of representing designs, including data dictionaries, mock-ups, object descriptions and pseudocode</li> </ul>	<ul style="list-style-type: none"> <li>• interpret solution requirements and designs to develop working modules</li> </ul>	<ul style="list-style-type: none"> <li>• All solution requirements and designs are interpreted accurately to developing working modules.</li> </ul>	
<ul style="list-style-type: none"> <li>• characteristics of data types</li> <li>• types of data structures, including associative arrays (or dictionaries or hash tables), one-dimensional arrays (single data type, integer index) and records (varying data types, field index)</li> <li>• formatting and structural characteristics of files, including delimited (CSV), plain text (TXT) and XML file formats</li> </ul>	<ul style="list-style-type: none"> <li>• use a range of data types and data structures</li> </ul>	<ul style="list-style-type: none"> <li>• Comprehensive selection of relevant data types and data structures to develop working modules.</li> </ul>	
<ul style="list-style-type: none"> <li>• a programming language as a method for developing working modules that meet specified needs</li> <li>• naming conventions for solution elements</li> <li>• processing features of a programming language, including classes, control structures, functions, instructions and methods</li> <li>• algorithms for sorting, including selection sort and quick sort</li> <li>• algorithms for binary and linear searching</li> </ul>	<ul style="list-style-type: none"> <li>• use and justify appropriate processing features of a programming language to develop working modules</li> </ul>	<ul style="list-style-type: none"> <li>• Comprehensive selection and use of relevant processing features of the programming language to develop all working modules.</li> <li>• Comprehensive justification and explanation of how the selection of appropriate processing features of the programming language are used to develop working modules.</li> </ul>	
<ul style="list-style-type: none"> <li>• validation techniques, including existence checking, range checking and type checking</li> <li>• techniques for checking that modules meet design specifications, including trace tables and construction of test data</li> </ul>	<ul style="list-style-type: none"> <li>• develop and apply suitable validation, testing and debugging techniques using appropriate test data</li> </ul>	<ul style="list-style-type: none"> <li>• Comprehensive use of relevant data validation techniques are applied efficiently and effectively to check the reasonableness of all input data.</li> <li>• Comprehensive use of test data is expressed in a testing table, with both expected and actual output stated, and showing detailed evidence of debugging.</li> </ul>	
<ul style="list-style-type: none"> <li>• purposes and characteristics of internal documentation, including meaningful comments and syntax</li> </ul>	<ul style="list-style-type: none"> <li>• document the functioning of modules and the use of processing features through internal documentation</li> </ul>	<ul style="list-style-type: none"> <li>• All software modules include comprehensive internal documentation regarding the functioning of modules and use of selected processing features.</li> </ul>
